

The SonicWALL® TZ Series offers a revolutionary breakthrough with higher performance protection, new redundancy capabilities, comprehensive Anti-Spam integration, application intelligence and control, and other innovations to protect and improve the efficiency of distributed enterprises and small-to-medium-sized businesses (SMBs). Available in standard and wireless configurations, the TZ 100 and TZ 200 Unified Threat Management (UTM) firewall appliances keep you ahead of increasing bandwidth requirements, emerging security threats and rapid expansion of Web application use enabled by Web 2.0 advancements.

The TZ 200 and TZ 100 Series appliances provide intelligent protection, business-class performance, advanced networking features and configuration flexibility in an affordable desktop appliance that's easy to set up, operate and manage.

Unified Threat Management.

The TZ 200 and TZ 100 Series appliances offer gateway anti-virus and anti-spyware, intrusion prevention and content filtering on a high performance platform through its unified and simple management interface. This powerful combination ensures state-of-the-art security at a low total cost of ownership.

Gateway Anti-Malware and Intrusion Prevention.

Tightly integrated, signature based Gateway Anti-Virus, Anti-Spyware and Intrusion Prevention protect against a comprehensive array of network and application layer threats by scanning packet payloads for attacks and exploits targeting critical internal systems. This provides a first layer of defense by stopping malware before it can reach systems on your network.

Multi-WAN Failover

The TZ 200 and TZ 100 Series appliances support WAN failover across multiple Ethernet interfaces to ensure uptime that is critical to many small businesses and retail deployments.

Powerful Secure Remote Access

Integrated SSL VPN technology enables clientless, remote access to computers, email, files and applications from a variety of platforms as well as full network access through NetExtender™. Users can also use IPSEC VPN to connect to the TZ 200 and TZ 100 Series appliances with a Global VPN Client.

PLATFORM FEATURES

SonicOS is engineered to reduce risk, cost and complexity by integrating state-of-the-art deep packet inspection firewall, wireless and VPN technologies to deliver comprehensive protection and maximum performance.

Deep Packet Inspection firewall

SonicWALL Reassembly-Free Deep Packet Inspection™ technology scans against multiple application types and protocols to protect against internal and external threats at both the application layer and the network layer.

Intuitive Management

Powerful set-up wizards make it easy to quickly set up VPN Tunnels, policies and network rules, which can then be fine-tuned through an intuitive Web interface. All application and signature updates are obtained automatically by the firewall and are effective immediately without reboots or downtime. A management LCD screen eases deployment and integration in a data-center.

Business Continuity

Your network will continue to operate without interruption even if there is a hardware or software failure with Active/Passive failover. Stateful synchronization across the appliances enables failover without interruption to existing network traffic and VPN tunnels.

Network Protection

Virtual Private Networking

High-performance Virtual Private Networks (VPNs) easily scale to thousands of end points. And SonicWALL Clean VPN™ protects your VPN access and VPN traffic, securing your remote access tunnel and decontaminating the traffic running over it.
