Central Station Monitoring Available For Monthly Fee.

WHAT IS SMART HOME CONTROL

Smart Home Control is the way that all of our security devices and appliances are networked together to provide a seamless control over all aspects of your home environment. It can control lighting and simple appliances with full control of your home from your iPhone, Android, Tablet, and/or Computer.

With Smart Home Control, you dictate how a device should react, when it should react, and why it should react. You set the schedule and the rest is automated based upon your personal preferences providing total security, convenience, control, money savings, and an overall smarter home environment. The system can also alert you to events that you might want to know about right away while you are gone, like water leaks and unexpected access to your home. At any time, you can use your iPhone, Android device or other remote control and change the settings in your home instantly.

Our security products are designed to work together seamlessly providing you with the technology you need to deliver sophisticated security for peace of mind—from the simplest to the most challenging.
