- Dimensions: 103 \* 60 \* 29.5mm

## Includes:

- IR LED Motion Sensor Camera DVR
- RCA cable
- 12V power socket
- Remote Control
- Anchorage screws

## OVERVIEW

This Hidden HD Camera is no ordinary motion sensor, this is a **hidden camera** disguised as a motion sensor. This camera/recorder can be placed anywhere in a home to catch un-welcomed guests or anyone not doing what they are supposed to be doing. This camera has **motion activation** recording so you do not have to sit through hours of no activity. It has great HD resolution at 720p. With this unit there is a light that will light up in order to have **night vision recording** capabilities. This unit is not battery operated, you simply connect the power cable provided straight into any 12V DC wall outlet. The video is stored onto a micro SD card. Storage Consumption is 15 minutes per GB. The unit is both Windows and Mac compatible too.

The interface is very user friendly and requires no special software for playback. You simply take the SD card and insert it into your computer/laptop for playback.
