

CONVERT YOUR 8/SUPER 8MM, &16MM MOVIES TO HIGH QUALITY DVD'S!

The archiving tool of choice for the Academy of Motion Pictures Film Archives in Hollywood!

WHY CONVERT MY FILMS

The biggest reason is that 8mm, Super 8mm, and 16mm projectors are incredibly difficult to find. Projector bulbs are even harder to come by. The good news is that even films that are 40 to 50 years old can still look great on DVD using our state-of-the-art transfer equipment.

Imagine showing the kids moving pictures of their parents as children! See the faces and mannerisms of loved ones who have long-since passed away. Relive "the good old days" on any DVD player! The images captured on those old reels are priceless, and your family will thank you for saving a piece of their history.

How many films can be placed on a single DVD?

A standard-play DVD can accommodate 2 hours of playing time. Each 50-foot reel of film is about four minutes. That means we could fit about 30 50-foot reels onto a single DVD.

HOW DO I BEGIN

STEP 1: Complete Order Form

Once you complete our order form, place it in a box along with your films, and ship them to the address below with a shipment tracking number.

STEP 2: Process Film

Upon arrival, your vintage films will be treated with the best of care throughout our entire process as each frame is scanned with a standard definition 1CCD camera. Our equipment performs TRUE frame-by-frame scanning just under 15fps. It also offers 100%, totally flicker-free playback at any speed desired.

STEP 3: Receive Your DVD

Once your film is converted by our in-house professionals, you will be notified by telephone, and email. A tracking number for your return shipment will be provided along with your DVD to watch anytime. The original films you receive back should then be stored in a cool, safe, and dry location.

DELIVERABLE OPTIONS

DVD Authoring allows us to create interactive menu options with title captions for you to choose from. Your DVD also comes with a full-color, high-resolution, on-disc image of your choice. So pick your favorite print or digital photo, and send it along with your order.

Uncompressed film transfer data can be recorded onto an external portable hard drive. You can also purchase anyone of the following drives below from us:

160GB drives hold 11 hours
250GB drives hold 17 hours
500GB drive hold 34 hours

NOTE: Data can also be saved as .mov (best for Mac) or .avi (best for PC).
