

Spreading the good news of Jesus Christ throughout the world!

WHAT IS IT?

Netcasting or Podcasting is a unique innovation in content, publishing and delivery. It is similar to an Internet radio program. Users simply connect their portable audio devices to their computer, log on a subscription service, and subscribe to that site's feeds. Audio content is then "pushed" from the origin source automatically to the user's computer, iPod or MP3 player.

Netcasting allows education in the Gospel to become more reachable than ever before, especially to our youth where they "live" and use the Internet. Netcasting is not a replacement for the church, but it provides an additional outreach for our youth.

WHY CONSIDER IT?

With church attendance falling in many parts of the country, more and more pastors today are getting involved in sharing the good news of Jesus Christ beyond the church walls to a new pulpit for sermons to help win even more souls for Christ.

Netcasting is quickly becoming an affordable way to broadcast your sermons across the Internet where more than 10 million people are. Church media on the web will not only reach the lost, but can help to bring in the lost.

The next time you enter an airport, subway, college campus, or train station, look around to see how many people are listening to mp3 players.

WHERE DO I BEGIN?

If your church or ministry is looking for an easy and affordable solution to turn sermons or any recorded message into a Netcast, just one call to ABS Technologies is all it takes to get you connected. Let us help you expand your pulpit worldwide!

Here's how to get started:

- ✦ Select a Package
- ✦ Record a Message
- ✦ Publish it Online

For more information contact: ABS Technologies Toll-Free at **877-888-8894** for a free consultation.
